

YEDIDA SAI RAM

Unity / C# Game Developer

Hyderabad, India (open to Bangalore / Pune) • +91 6309641235 • sairamvedidaoffl@gmail.com

[Portfolio](#) • [GitHub](#) • [LinkedIn](#) • [Google Play](#)

Unity / C# developer with multiple **commercially shipped titles** at 7Seas Entertainment — racing, tower defense, FPS, and real-time multiplayer (Photon PUN2) — plus independently shipped mobile games on Google Play, itch.io, and Amazon Appstore. Strong in gameplay systems, enemy AI, clean modular architecture, and WebGL performance (**locked 60 FPS on mobile and desktop**). Ships end-to-end, and teaches game development to a growing audience.

TECHNICAL SKILLS

Game Engines: Unity (2D & 3D, URP, WebGL), Unreal Engine 5

Languages: C# (primary), C++ (basic)

Gameplay & Multiplayer: Enemy AI (NavMesh, FSM), character controllers, procedural spawning, object pooling, Photon PUN2 networking

Architecture: Singleton, interfaces, event systems, ScriptableObjects, modular architecture

Optimization & Tools: Unity Profiler (60 FPS WebGL/mobile), Git, VS Code, Unity Input System, H5 ad integration

EXPERIENCE

Unity / C# Developer | 7Seas Entertainment Ltd.

May 2026 – Present

Hyderabad, India — shipped multiple WebGL / HTML5 titles live on company platform; all hold **40+ FPS (60 locked)** across mobile and desktop.

- **Water Car Simulator** — built the full game outside the base vehicle controller: garage / upgrade economy (speed, fuel, handling), career + free modes, AI opponent racers, lap / race logic, HUD; integrated HTML5 (H5) ads.
- **Tower War Defense (3D)** — built the power-up system (meteor, tornado), sub-levels + wave progression, tower placement + coin economy, and waypoint-based enemy pathing.
- **Operation Secure (3D FPS)** — built enemy AI, mission / objective system (clear-zone and secure-the-cards), minimap, and weapon selection + stats; adapted the base FPS controller to the game design.
- **Cross Fire Rush (real-time multiplayer FPS, Photon PUN2)** — built most gameplay and networking — rooms / matchmaking, player and shooting sync, health, spawns — on a base FPS controller. Releasing 2026.

Freelance Contract Unity Developer | Remote

Dec 2025 – Mar 2026

- Designed a modular manager architecture using the Singleton pattern to handle game state, UI, and gameplay flow across scenes.
- Implemented dynamic difficulty-scaling systems to improve player retention and smooth gameplay flow.

Unreal Game Programmer Intern | Arcanion

May 2025 – Aug 2025

- Built a 3-level Unreal prototype featuring obstacle-based level design and enemy combat systems using Blueprints and C++.
- Implemented and refined UI elements and helped integrate the in-game dialogue system.

PROJECTS

FractureRun | Unity, C#, Mobile | [GitHub](#)

- Endless-runner with procedural platform spawning built on object pooling for stable performance.
- High-score persistence via PlayerPrefs with clean save/load; optimized to a consistent 60 FPS on mid-range Android.
- Shipped on Amazon Appstore, itch.io, and Google Play (closed testing); full README with architecture and design decisions.

Virus Escape | Unity, C#, 3D Top-Down Action, Mobile | [GitHub](#)

- 3D top-down action: collect cores to unlock portals and progress through levels.
- Enemy AI using Unity NavMesh with a distinct Patrol / Chase / Attack finite state machine.
- Health & stamina systems built on C# interfaces; a Scene_INITIALIZER that auto-instantiates managers at runtime, eliminating missing-reference bugs.
- Mobile joystick controls via Unity's new Input System; event-driven SFX system for footsteps, damage, and interactions.

EDUCATION

B.Tech, Computer Science | Ideal Institute of Technology, Kakinada

2022 – 2025

TALKS & COMMUNITY

- Invited Speaker — Ideal Institute of Technology, “Game Development & Careers in Games” workshop, Oct 2026.
- Creator, [“Game Dev Telugu”](#) — Unity / C# education channel in Telugu; 700+ subscribers, top video 6.7K views.
