PROFILE

B.Tech Computer Science graduate (2025) and Unity Developer with professional experience in Unreal Engine and independent contract work. Proven ability to develop and ship mobile games, architect procedural systems, and implement physics-based character controllers.

TECHNICAL SKILLS

- Engines: Unity (C#), Unreal Engine (C++/Blueprints).
- Gameplay: Character Controllers, Animation State Machines, Procedural Spawning.
- Tools: Git, Unity Input System, PlayerPrefs, Mobile Optimization.

PROFESSIONAL EXPERIENCE

Independent Contract Unity Game Developer | Remote | Feb 2026 – Present

- Architecting Singleton-based Managers for efficient state handling and rapid prototyping of indie game concepts.
- Implementing dynamic difficulty scaling systems to optimize player retention and gameplay flow.

Unreal Game Programmer Intern | Arcanion (Indie Studio) | May 2024 – Aug 2024

- Developed a 3-level prototype in Unreal Engine, including obstacle-based levels and enemy combat systems.
- Engineered loot-drop mechanics and fast-paced running sequences optimized for smooth performance.

PROJECTS

Fracture Run | Mobile Game (Shipped: Amazon Appstore & itch.io)

- Developed a complete endless runner with Procedural Platform Spawning using Coroutines.
- Managed the full deployment lifecycle, including high-score persistence and mobile performance tuning.

3D Character Action Prototype | Unity / C#

- Developed a physics-based controller using the Unity Input System and CharacterController.
- Synchronized vertical velocity (jumping/falling) with skeletal animations via a custom Animator Controller.
- Created procedural collectible animations using Sinusoidal math to minimize animation overhead.

EDUCATION

- B.Tech in Computer Science & Engineering | Graduated 2025
